PROFESSIONAL SUMMARY

Product and UX designer with five years across industrial design, digital product design, and AI-assisted prototyping, in Turkey, Poland, Germany, and Spain. I run user interviews and usability tests, build Figma component systems, and write the Flutter code when a static screen is not enough to test the idea. I read frontend and backend code, and I explain technical work to the people who did not build it. I finish an MA in Strategic Design Management at IED Barcelona in December 2026. Available full time after 15 December 2026. English C1, Turkish native, Spanish A1.

CORE COMPETENCIES

Product and UX design | User research and usability testing | Figma component systems and design tokens | AI-assisted prototyping with Claude Code | Flutter and React builds | Industrial design and CAD: Rhino, KeyShot | Hands-on assembly, CNC and laser cutting use

WORK EXPERIENCE

Self-directed practice

Feb 2026 - Present

Independent Product Designer

Barcelona, Spain

- Design and ship my own product work end to end: research, flows, Figma systems, and working prototypes built with Claude Code.
- Structured a freelance offer around three tracks: idea to prototype for founders, standalone UX research, and design-only engagements.
- Design AI product interfaces on my own time, including agent concepts and evaluation workflows.

Admirise Digital Performance Agency

Jul 2025 - Jan 2026

UX/UI Designer

Frankfurt, Germany (Remote)

- Designed end-to-end Shopify and WooCommerce flows covering information architecture, navigation, product detail pages, cart, and checkout.
- Built token-based Figma component libraries the dev team could use without a call every time.
- Ran competitor and heuristic analyses; produced user journeys, personas, and task flows; applied WCAG 2.1 patterns across touchpoints.
- Worked each day inside a remote team, with German, Turkish, and English-speaking colleagues in marketing, development, and account management.

Elysee Playgrounds

Sep 2023 - May 2025

Product & Visual Designer

Istanbul, Turkey

- Turned product requirements into high-fidelity visuals and detailed 3D models in Rhino and KeyShot.
- Analyzed how parts and interfaces interact to improve assembly flows; evaluated usability and ergonomics, then iterated prototypes on field feedback.
- Created interaction diagrams and design documentation that kept engineering and production working from the same reference.
- Prepared specification sheets and worked through feasibility with engineers.

DFDS

Jul 2023 - Aug 2023

UX/UI Designer, Intern

Istanbul, Turkey

- Conducted user research and moderated usability tests; contributed findings to UX audits.

- Designed low to high-fidelity prototypes and standardized Figma file structure and component libraries.
- Documented requirements and acceptance criteria with product and operations teams; supported Agile ceremonies.

Turasis Telecom Systems

Jun 2020 - Sep 2022

Industrial Product Designer

Istanbul, Turkey

- Designed telecom hardware enclosures and physical product interfaces using tolerance-aware CAD.
- Produced structured, bill-of-materials-ready documentation for engineering and manufacturing.
- Coordinated with engineers and external suppliers to resolve part interaction issues before they reached production.

PROJECTS

Pocket Pediatrics

IED Barcelona x Fujitsu healthcare brief

Voice-first AI care coordination app, team of four designers. I built the working prototype on my own: the Flutter code and the UI, on a Supabase backend, with OpenAI GPT-4o-mini and Whisper for the AI and voice features. Research pointed to cognitive load as a key source of stress for caregivers, so we built it voice-first. The team put 14 participants aged 24 to 62 through 5 core journeys, plus 2 expert reviews. Sharing scored 4.8/5, summary clarity and information completeness both 4.6/5, and overall experience 3.8/5. After 7 of 14 participants looked for sharing on the appointment summary, the team moved it there and added a confirmation after sending. Live demo: pocket-pediatrics.vercel.app (choose the Oscar profile).

Figma, Flutter, Supabase

Rewheel

Master's thesis project, IED Barcelona

A marketplace service for Barcelona's daily riders: a rider posts a bike fault, mechanics send their own offers, the rider picks one and pays per visit, and the mechanic repairs the bike where it is kept. Research: a survey of owners of unused bikes (n = 10), a survey of daily riders (n = 7), one repair I did and timed myself (88 minutes, 18 of them hands-on), a service blueprint and a three-year financial model. None of the 7 daily riders chose a monthly membership. The app has a rider, a mechanic and an operator view in English, Spanish, Catalan and Turkish, built with AI coding tools. It has run full repair cycles with fictional demo accounts only; the pilot with real riders is still to run. Live at rewheel.vercel.app; the thesis dossier is in draft.

Flutter web, Firebase

Challenge-Based Innovation Project

Esade, UPC and IED Barcelona, Sep 2026 - Present

Designer in a multidisciplinary team exploring a challenge through a quantum computing technology lens.

EXE

AI life-admin agent concept for freelancers

Conceptualized and mapped an AI agent workflow for freelance administration, and explored interaction patterns for autonomous agents.

EDUCATION

Master's, Strategic Design Management IED Barcelona — Jan 2026 - Dec 2026 (expected)

Industry brief with Fujitsu: Pocket Pediatrics, voice-first AI care coordination.

Bachelor's Degree, Industrial and Product Design Doğuş University, Istanbul — Sep 2019 - Feb 2023

Erasmus exchange: Academy of Fine Arts in Wrocław, Design, Sep 2022 - Feb 2023.

Bachelor's, Industrial and Product Design Anadolu University, Turkey — Sep 2015 - Jun 2018

Backend Web Development (coursework, no certification) Patika.dev, Patika+ programme — Aug 2024 - Nov 2024

Piscine, Software Development (coursework, no certification) 42 Berlin — Oct 2024 - Nov 2024

SKILLS

Design and prototyping: Figma (advanced component systems and tokens), Rhino, KeyShot, wireframing, usability testing, service blueprints

Making and fabrication: Hands-on assembly in production; production-ready 3D models for CNC machining; CNC and laser cutting (I am not a CNC machine operator)

AI tools: Claude Code, Google Antigravity CLI, Cursor, Copilot, Lovable; OpenAI APIs (GPT-4o-mini, Whisper)

Build: Flutter, React, TypeScript, HTML/CSS, Git, Supabase; bootcamp-trained backend: C#, ASP.NET, SQL, PostgreSQL, REST APIs

Languages: Turkish (native), English (C1), Spanish (A1), Polish (basic), German (basic)

References: A professional reference from Roche (Design Director, User Experience Design and Validation) is available on request.
